

TOPFLOOR SELF WEIGHT & FINISHES

SELF WEIGHT AND FINISHES – Weight - Kg/m²

Depth of Slab	150mm	200mm	250mm
Slab only	246	296	346
Slab and Joint	263	318	371
Slab, Joint & 40mm levelling screed	363	418	471

The above self weights of the various slab depths are 30% lighter than an in-situ slab of a similar depth.

Topfloor slabs achieve longer spans than in-situ concrete of a similar depth. This achievement is attributed to high strength concrete and prestressed wire and strand.
